

Aspirin is a medication used to reduce pain, fever, or inflammation. It is commonly used for headaches, muscle aches, and minor pain.

The usual dose of aspirin for adults is 325-650 mg every 4 hours as needed. Do not exceed 4,000 mg in 24 hours.

Aspirin should not be given to children under 16 years old due to the risk of Reye syndrome, a rare but serious condition.
